# PLUTO LITE

## universal projector cage

A new, innovative range of lightweight, secure projector cages that will hold most projectors, whilst still retaining full functionality. Projectors come in numerous shapes and sizes and the Pluto Lite range offers a choice of 4 different models that will accommodate the majority of projectors that are available in the market today.

### Key Features

- Lightweight, yet still secure
- Economical solution
- 45° tilt
- 360° rotation
- Micro Adjustment Thumbscrews
- Drill resistant locks

### Simple to fit

The Pluto Lite cage comes complete with a removable mounting plate. Projectors have a variety of hole sizes and fixing points, but the removable mounting plate will allow the majority of projectors to be fitted, using the spacers and fixings provided. Once the projector is fitted, the mounting plate slots simply into place inside the cage. The projector can be easily removed with the mounting plate when required, and re-installed without having to re-set the projector position.

### Adjustment

The innovative swivel mount plate is cleverly angled and this allows up to 45° tilt, far in excess of the industry standard. Combined with the 360° rotation, the Pluto Lite swivel mount allows you to easily adjust your projector to the required position. Once the ball swivel mount is tightened, the four Micro Adjustment Thumbscrews allow fine tuning for perfect image alignment. The swivel mount is designed to fit a 50mm column as standard, although Top-Tec supplies adaptors to accommodate other column systems.

### Security and Flexibility

The Pluto Lite is designed to cater for the countless lens, cabling and access positions that are found on projectors by having different cut-outs on each side. The locking bar secures both the projector and the removable mounting plate into position and is fitted with a drill resistant push button lock. The locking bar is reversible and there are three positions on the top of the cage and two on the base that accept the locking bar, thus providing a number of fixing options. The two positions on the base of the cage allow the cage to be fitted close to a ceiling where there would be insufficient room to remove the locking bar from the top.

The cage is well ventilated and there are cable management holes incorporated on the top of the cage. Additional security options are offered by a fixing hole into which a 10mm Security Cable can be inserted. This can then be secured to the wall or ceiling.
