TOP-TEC
AV SECURITY

PLUTO SHORT THROW Secure Projector Mount

for Hitachi ultra short throw LCD projectors

The innovative Hitachi Ultra Short Throw projectors incorporate technology that generates a 60" image at a screen distance of just 42cm. As a result, you can reduce shadowing and display crystal-clear images, even in the smallest meeting rooms and classrooms.

However, it is vitally important that you are able to secure this new technology. Dalen Top-Tec has worked closely with Hitachi Europe Ltd to develop the Pluto Short Throw Secure Projector Mount to help prevent unauthorised removal or theft.

Key Features

- Suitable for Hitachi CP-A100, ED-A100 and ED-A110 ultra short throw projectors
- Bespoke design
- Tilt, swivel and height adjustment
- One touch slide system
- Cable entry points
- Ventilation slots

Simple to fit

The Pluto Short Throw Secure Projector Mounts are simple to fit. The projector is initially fitted onto a mounting plate that hooks into the front section and locks into place.

The rear section is bolted to the wall, which is designed to meet industrial standards with fixing holes at 400mm centres for stud walls, with the cover plate hiding and securing the bolts that are fixing the complete assembly to the wall.

The front section assembly is slid into position and is secured into place with a drill resistant high security lock.

Adjustment

The unique design offers fine adjustment in all required directions. These adjustments allow for accurate image alignment.

The adjustment screws are fully accessible even after the projector is fully installed.

The ability to alter the projected image size provided by the simple one-touch slide system. Once optimum picture size is achieved, two thumbscrews are tightened to prevent unwanted movement.

Accessibility

The bulb, filters and cables are easily accessible, without needing to remove the projector from its mount, thus aiding routine maintenance.

A hole on the side of the front section provides access to the removable projector cable cover. Space has been allowed for the cable cover to be accessed and removed with the projector in situ.

Fixing holes at 400mm centre
