

# SYNC BOARD

Powered by Cambrionix

## Key Features

- Truly universal, supporting any device that charges via USB
- Firmware running on board detects connected device on a per port basis
- Gives correct power to charge at max rate. Detects full charge and adjusts the supply accordingly
- Updateable to new firmware, supporting future phone/tablet releases
- Designed and manufactured in the UK to the highest possible compliance standards (Compliant with CE, FCC, UL Listed, CB Certification, ROHS and WEEE)
- Charges and Syncs upto 16 devices per board

The Cambrionix U16S installed in TOP-TEC TabStore Trolleys is the market leading solution for charge and sync of mobile devices. The U16S is a truly universal product, charging any device chargeable via a USB cable.

The board uses firmware that recognises the attached device, loads the manufacturer's charging profile, and delivers the correct power to each port to charge at the maximum rate.

Furthermore, the board is fully updateable with new firmware to support future USB chargeable smart phones, tablets and many more devices. This makes the board future proof and a more long-term cost-effective solution.

Once charge is complete power is reduced to preserve battery life as well as reducing power consumption.

TOP-TEC's Tabstore Charge and Sync Trolley features 1 or 2 sync boards, allowing stored devices to synchronise data as devices charge. Each board is packaged and fitted at the back of the TabStore with neat internal cable management, equipping the TabStore with a USB port for each stored device, and providing a single port on the outside of the trolley to sync all devices through.
