

# JUPITER EXTENDING VESA SCREEN MOUNT

Our JUPITER EXTENDING VESA SCREEN MOUNT is a versatile, unobtrusive wall bracket that enables mounted screens to pull out from the wall. This low-profile full motion mount fits most 32"–63" screens up to 36.3 kg and is well-suited for those applications where seamless integration counts most.

The bracket is designed to accommodate screens with VESA mounting hole positions of 200x100mm up to 600x400mm. However, our design team are able to adapt the plate to fit VESA positions of 75 x 75 mm at no extra cost, or other mounting hole positions with an adapter plate for a small additional fee.

## Features

- Tilt range up to 20° to reduce glare
- Extends up to 14" (36 cm) from wall
- Minimum profile is just 3.2" (8.2 cm)
- Tilt and pan for maximum viewing flexibility
- Integrated cable management and covers guide and hide cords
- Arm design provides ample throw and nests centered on the wall

## Standard Paint Finishes
